

Peer Solutions - Your VSaaS Turnkey
One Stop Service

CRM + License

Hardware + Software + Management

1

Your VSaaS

Research, development, and production for surveillance equipment and software along with the associated integrations between hardware and software all have been completed for you. You can now customize the functionalities according to your requirements and your brand image, enabling a swift technology transfer. The VSaaS solution could be utilized for your own premises or be distributed to your dealers, establishing your own VSaaS supply chain.

Peer Solutions save you from the risks and time costs of developing everything from scratch, allowing you to quickly and economically obtain your own branded VSaaS business with the highest value proposition.

Advantages

Bring Your Own Brand

Fully-featured with white-labeling service

Save staffing, equipment expenses, and risks associated with development and integration, while saving time. Swiftly brought the verified and effective products to market.

Flexible Site Deployment

Support for pure cloud-based or hybrid on-premises projects

You can use the Peer series surveillance equipment and integrate existing cameras on-site too. Not only utilizing cloud features for cloud management, cameras on-premises could also be accessed directly without going through the cloud. Choose the appropriate equipment for cloud integration based on different site characteristics.

Reselling through Supply Chain

Not just making a transaction, you can manage sales channels as well

The built-in distribution management system provides services for calculating usage, pricing, inventory management, and invoicing for licensing. Peer solution not only offers video features but also serves as an one stop service for subscription-based solution.
